Section 11 - Toxicological Information

11.1 Information on toxicological effects

Acute toxicity refers to the short-term effects of a substance on aquatic organisms. It is typically measured by the median lethal concentration (LC50), which is the concentration of a substance that is lethal to 50% of the test organisms within a specific exposure time.

Chronic toxicity refers to the long-term effects of a substance on aquatic organisms. It can include effects on reproduction, growth, and development. In the image, the EC50 for microorganisms is 6.949 mg/L after 16 hours of exposure. The EC50 is the concentration of a substance that causes a specific effect in 50% of the test organisms.

Highest exposure level for a substance that is likely to be without unacceptable adverse effects. Acute effects systemic (Dermal): DNEL = 11.57mg/kg bw/day. Chronic effects systemic (Dermal): DNEL = 69.44mg/kg bw/day, ute effects systemic (Inhalation): DNEL = 1020.28mg/m³, Chronic effects systemic (Inhalation): DNEL = 6121.68mg/m³
